The holder of this certificate has completed the course CRRI101x Coral Reefs: Introduction to Challenges and Solutions.

The course includes the following modules:

Topics	Course duration (approx. hours)
Module 1: The Tropical Coral Reef Ecosystem	2
Module 2: The Importance and Value of Coral Reef Ecosystems	2
Module 3: Global Threats to Coral Reef Ecosystems	2
Module 4: Local Threats to Coral Reef Ecosystems	2
Module 5: Reef Monitoring Information and Data	2
Module 6: Designing Effective Solutions	2
Total	12

By completing the course modules and participating in the activities in this course participants will be able to

1. Identify the parts of coral reef ecosystems outlined in the course and describe how the components function and interact.
2. Discuss and compare the ways that coral reef ecosystems are valued across different locations, times and groups.
3. Describe the local and global threats and stressors that coral reef ecosystems face.
4. Describe some key principles for designing effective coral reef conservation projects and analyse and evaluate different solutions and projects using these principles.
5. Demonstrate the ability to cooperate effectively with others to share critically important information and solutions.
